

Maternal & Child Health Report

Prepared by Team Maternova

1. Maternal Fatal & High-Risk Conditions

- Postpartum Hemorrhage (PPH) — leading cause of maternal death.
- Pre-eclampsia / Eclampsia — hypertension with proteinuria; risk of seizures and stroke.
- Sepsis / Puerperal Infection — caused by unclean delivery practices or prolonged rupture of membranes.
- Obstructed Labour / Uterine Rupture — prolonged labour, needs emergency C-section.
- Gestational Diabetes — can cause macrosomia, birth complications.
- Preterm Birth Complications — respiratory distress, sepsis risk.

2. Common Infant Diseases (Rural & Urban India)

- Neonatal Sepsis & Pneumonia — leading infectious causes of infant death.
- Diarrhoeal Diseases — rotavirus, bacterial pathogens; poor sanitation increases risk.
- Measles, Pertussis, Tetanus, Tuberculosis, Hepatitis B — vaccine-preventable diseases.
- Meningitis — bacterial infection with high fatality rate.
- Umbilical & Skin Infections — common with unsafe cord care.
- Rural: higher sepsis, tetanus, diarrhoea; Urban: more respiratory diseases due to pollution.

3. National Vaccination Schedule (India)

Age	Vaccines
At Birth	BCG, OPV-0, Hepatitis B (birth dose)
6 Weeks	OPV-1, Pentavalent-1, Rotavirus-1, fIPV-1, PCV-1
10 Weeks	OPV-2, Pentavalent-2, Rotavirus-2
14 Weeks	OPV-3, Pentavalent-3, fIPV-2, Rotavirus-3, PCV-2
9–12 Months	MR-1, JE (if applicable), PCV booster
16–24 Months	MR-2/MMR, DTP booster

4. Nutrient Deficiency Diseases

- Pregnant Women:
 - Iron Deficiency — Anaemia, preterm birth, fatigue.
 - Iodine Deficiency — Goitre, hypothyroidism, fetal brain defects.
 - Folic Acid Deficiency — Neural tube defects.
 - Vitamin D Deficiency — Weak bones, neonatal hypocalcaemia.
 - Vitamin A Deficiency — Night blindness.
- Infants:
 - Iron Deficiency — Anaemia, poor cognition.
 - Vitamin A Deficiency — Eye disease, infection risk.
 - Iodine Deficiency — Cognitive impairment.
 - Vitamin D Deficiency — Rickets.
 - Protein Deficiency — Kwashiorkor, Marasmus.

5. Clinical Report Order & Requirements

- A. Baseline Data: Name, Age, Gravida/Para, LMP/EDD, Weight, Height, BMI, BP, Pulse, Temperature, Complaints.
- B. Rapid Tests: Urine dipstick (protein, sugar), Blood glucose, Hemoglobin, Malaria/Dengue (if febrile).
- C. Lab Investigations: CBC, Blood group & Rh, VDRL, HIV, HBsAg, Thyroid, OGTT.
- D. Imaging: Ultrasound (dating/anomaly/growth), NST (if indicated).
- E. Referral Triggers: BP $\geq 140/90$ + Proteinuria, Heavy bleeding, Fetal distress, Sepsis.
- F. Newborn Data: Birth weight, Length, Head circumference, Apgar score, Breastfeeding initiation.

6. Quick Checklist (One-Page Summary)

- Antenatal Visit:
 - ID, Contact, LMP/EDD
 - Weight, Height, BMI, BP
 - Hb, Urine Dipstick, Blood Sugar
 - Blood Group, HIV, VDRL, HBsAg
 - Ultrasound report, Immunization record
- Delivery & Newborn:
 - Vaccinations (BCG, OPV-0, HepB birth dose)
 - Birth weight, Apgar, Cord care notes
 - Breastfeeding initiated within 1 hour
